Eurorack-format 904-A VCF

The controlvoltage.org 904-A VCF module is a 3U 18HP Eurorack-format compatible true replica of the legendary 904-A voltage controlled low pass filter from the Moog modular series.

I'm currently working on the prototype and an exhaustive demo in HD audio and video will be available in a near future.

The module is scheduled for production in late Spring / Summer 2012.

The controlvoltage.org 904-A is entirely built with discrete components (no IC's!) and will match the original design of the 1960s, exception made for unavailable components that will be replaced with modern equivalents.

The design and the size are intended to retain both the aesthetical and physical appeal of the original. The module features high-quality connections and control parts and laser-engraved aluminum front-plates.

The estimated price is 250 €.
